

## NanoRetrofit 12-14 Gallon Soft

If your looking for an easy upgrade to your existing 12-14 gallon nano-aquarium, look no further than our Stunner LED Strips. Extremely simple to install, they provide dramatic shimmer effects, eye-popping colors and are extremely energy efficient - consuming only 6 watts each. They last up to 10 years before needing replacement, and run so cool - you'll never need your cooling fans again.

When keeping soft corals such as mushrooms, and zoanthid polyps, two Stunner strips will provide enough light for great growth and color. Soft corals do require a bit more blue wavelength light, so we usually recommend using a combination of our 8K White/Blue strip and Royal Blue strip. You just need to decide if you want to simply plug them in - or provide dawn/dusk control. Dawn/dusk control allows you to control the blue and white LEDs independently, and running the blue LEDs alone is extremely popular for viewing the amazing fluorescent colors in corals.

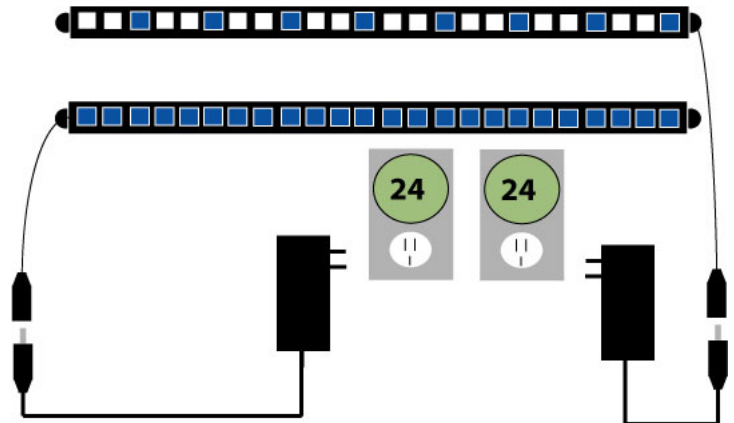

### Non-Independent Control

#### Product List:

Description	Qty
Stunner LED Strip 8K White/453nm Blue	1
Stunner LED Strip 445nm Royal Blue	1
Transformer 12 watt/24Volt	1
24 Hour Timer	1

### Independent - Dawn/Dusk Control

#### Product List:

Description	Qty
Stunner LED Strip 8K White/453nm Blue	1
Stunner LED Strip 445nm Royal Blue	1
Transformer 12 watt/24Volt	2
24 Hour Timer	2

### Common FAQ's:

Do I need to use a timer? A timer is recommended for convenience, but not required.

Can I use an inline dimmer? Yes, our inline dimmers work great for color mixing.

Do I need to add reflectors? No, the built-in reflector in your existing hood will work just fine.

Do I need to remove the cooling fans? We recommend keeping the fans installed, but you likely won't need them.

Can I mount the LED strips on the plastic cover? No, the LEDs must be mounted to the reflector under the cover. The clear cover must be used for protection from the water.
